Asbestos awareness training template

The Asbestos – Asbestos Management Plan Guide explains why it is important to manage NOA safely, when and where NOA may pose a potential health risk, who to contact for advice and the steps needed to manage NOA safely, in accordance with the NSW Work, Health and Safety Standards 2017 and the Asbestos Management Codes of Practice. Easy-to-use templates are designed to help people develop and manage an Asbestos Management Plan. All models are available in 2 formats. The first includes fields where users can type information, and the second is in PDF format that can be printed for handwritten notes. This model is designed for use when performing risk assessments on various parts of properties as work is required. This model allows users to itemize the information they need when conducting a property risk assessment for natural asbestos. This model allows users to record incidents and steps to manage and record incidents if they occur. This model assists managers in recording and maintaining records of training carried out by workers in the awareness of asbestos and natural asbestos. The Decontamination Data Sheet provides information on the importance of personal and equipment decontamination when working with NOA and the steps for the disposal and transportation of NOA. Download size 1.3MB The Fact Sheet noa RPE and EPI provides information about respiratory protection equipment (RPE) and Personal Protective Equipment (PPE) is, why it is essential and how to use it properly and effectively. Download size 1.3MB Download Size 1.7MB Access and download all files including "Print Ready" files with crop marks, digital files and fact sheets etc. ACCESS TO ALL FILES Share this information at: Page 2 At least 1 in 3 Australian homes contain asbestos, including bricks, weatherboard, fibro and coated houses and apartments. Asbestos was widely used in building materials before 1987, so if your house was built or renovated before 1987, it probably contains asbestos. If asbestos is disturbed during renovations or especially your health and the health of your family may be at risk. DIY is not recommended where asbestos is present. When renovating or working in and around homes, in case of doubt, take over asbestos materials and take every precaution. Dealing with asbestos is important and serious, but it's not overwhelming – It's MANAGEABLE! If you are not sure if asbestos is in your home, you can inspect it for a licensed removal or a licensed asbestos assessor. Products made of asbestos cement include fibro sheets (flat and wavy), water pipes, drainage and chaminutos, tiles, gutters and floor coverings and it could be anywhere! If you find asbestos in your home; Don't cut it! Don't stick! Don't drop it! Don't it! I didn't see it! Don't shave! Don't rub it! Don't take it apart! Don't tip! Don't destroy it! Do not demolish! E E You do... Don't pour that! If undisturbed asbestos materials in good stable condition will hardly release dangerous fibres and pose a health risk. Generally, you do not need to remove asbestos. Paint it and leave it alone, but remember to check occasionally for any signs of wear. There are legal requirements regarding the management of asbestos, its removal and disposal. While some may follow safety standards and requirements to remove small amounts of asbestos, the safest way to manage your removal is to retain a licensed asbestos removal professional equipped to protect you and your family from the dangers of asbestos dust and fibers. Where asbestos fibers are friable (loose and not bound to building materials), only friable licensed asbestos removers are allowed to remove it. Professional asbestos removal is affordable. You can't afford not to use a pro! The cost of asbestos removal by a licensed professional is comparable to most licensed traders, including electricians, plumbers and tiles. The cost of disposal in a legal location is often included with the cost of removal by a licensed professional. If you must work with any material that may contain asbestos or remove asbestos yourself, protect yourself and your family and follow the legal and safety requirements for asbestos handling to minimize the release of dust or small particles from asbestos materials. There are a number of safety precautions you will need to take, including wearing specific protective clothing, the correct mask or breathing apparatus and ensuring that you minimize dust and dispose of it legally. Download Fact Sheet 1 or 2 for instructions on how to do this. Never use tools in asbestos materials, as they will make asbestos fibers in the air, including: Power tools such as electric drills, angle grinders, circular saws and electric sanders. Never use high-pressure water jets or compressed air. Don't play renewal roulette! Think smart. Think safe. Think asbestosawareness.com.au - Because it's not worth the risk! Several tokens have been developed for owners on how to manage asbestos in their homes safely. Important safety facts to know when working with asbestos Share this information at: at:
